

1. Write a Python function to find the Max of three numbers.

```
a = float(input("Enter first number: "))
```

```
b = float(input("Enter second number: "))
```

```
c = float(input("Enter third number: "))
```

```
if (a > b) and (a > c):
```

```
    largest = a
```

```
elif (b > a) and (b > c):
```

```
    largest = b
```

```
else:
```

```
    largest = c
```

```
print("The largest number is", largest)
```
